## Resume

This collection has begun its operating since 1973 under the title of "Nadi Farm" in the field of apartment greenery productions, and then it was able to stabilize its position by developing the design sectors of the green space and maintaining it as "Nadi Flower and Plant Collection". By gathering a group of experts and employing more than 70 active personals, and obtaining productions and exploitation licenses, this collection was succeeded in achieving its most considerable goal, which was to combine architecture and urban planning with green space in a formed way.

The successful performance of Nadi Flower and Plant Collection is a result of the complete presentation of green space services, from design, implementation, restoration to the maintenance of green space. Hence, green wall, roof, drip irrigation, etc.... Also, this collection contributes to its glory by making an uninterrupted effort to produce a variety of flowers and plants with apartments quality, shrubs, branch flowers, pots, and flower boxes, etc.

---

## Nadi Greenhouse

One of the most remarkable honors of Nadi's Collection is that to produce all kinds of houseplants, garden plants, and ornamental shrubs. Nadi greenhouse, with an area of more than 11,000 square meters and more than 200 different plant species, is capable of covering the needs of customers with all tastes. The variety of Nadi Greenhouse plants are listed as follow:

- **Potted-Apartment Flowers:** Geranium, Cactus, Solenostemon, Dahlia, Lavender Plant, Cycad Plant, Orchid, Dieffenbachia, Yucca, Aglaonema, Philodendron, Pothos, Ponytail Palm, Spathiphyllum, Dracaena, Sansevieria, etc.
- **Ornamental Trees and Shrubs:** Boxwood, Cypress Tree, pine, Sycamore Tree, European Ash, Ornamental Twigs Branches, Acacia Tree, Bougainvillea, Sycamore Tree, ornamental barberry, Ligustrum Vulgare, etc.
- **Seasonal - Seedlings:** Floss Flower, violet, Common Sage, Pot Marigold, Marigold, Common Zinnia, Snapdragon, Petunia  $\times$  atkinsiana and ...
- **Branch Flowers:** Anthurium, Gladiolus, Clove, Chrysanthemum, Sterlitzia or Bird of Paradise, Daffodil native to Iran, Iris, trumpet-flower and ...

## Features and Services of Nadi Greenery Collection

- Topography and drawing a plan drawing
- Site designing with two- and three-dimensional software (possibility of pre-plan over viewing)
- Site designing and architecting and plant arrangement as follow the principles of green space design utilizing modern and up-to-date methods
- Design and implementation of the roof garden and green wall
- Implementation of fountains, ponds, and waterfalls
- Implementation of various types of floors, facades, and outdoor flooring
- Designing and constructing of various type of structures of pavilions, pergolas, canopies, and domestic greenhouses
- Lying out and implementation of barbecues, hearths, and outdoor fire-places.
- Designing and implementing of various
- type for water systems and pressurized and drip irrigation systems
- Implementation of lighting systems and site lighting
- Maintaining green space, including soil amelioration, pruning, identifying and controlling weeds, pests, and diseases
- Preparation and distribution of houseplants, ornamental and fruitful plants, and agricultural and horticultural inputs
- Preparation(Preparing) and supplying of plant and animal fertilizers, leaf mold, peat moss, vermicompost, etc.
- Specialized consulting and recognizing of pests, plant diseases, spraying poison and extermination
- Designing wedding car, decorating the wedding table and all kinds of bouquets

## Advantages of Nadi Flower and Plant Collection

- Designing and implementing of green space in the shortest possible time
- Quality and best-price guarantee
- The possibility of creating desired designs and patterns
- High-experienced in all greenery fields
- Commitment and support of executive affairs

---

## **Green Space Designing and Landscape Gardening**

The first and the most noticeable measure in possessing a beautiful green space is to prepare a principled, efficient design consistent with green space design's technical and engineering principles. Our professional experts, with architectural and horticultural science and art, and also the knowledge of the plant species production and the selection of more suitable elements, can demonstrate principled and, at the same time, more beautiful, competent, and lasting designs. The Engineering group of Nadi designers is one of the active complexes in garden space and green space design. So far, this collection has submitted numerous green space design and landscape gardening projects with various usages in it's resume.

Totally, the implementation of landscaping by Nadi collection to take place regarding the following steps and using modern methods and designs:

**A: Primary environmental Studies**

**B: 3-D Design Pre- Implementation**

**C: Implementation of Green Space**

**D: Final Environmental Studies**

---

## A: Primary environmental Studies

Our experts first, refer to the intended place to study the characteristics of the environment such as the form of the land, it's dimensions, angles, and topography, and to determine the direction of sunlight, building shadow, wind blow direction, walls around the building, visual features such as point, shape, color and texture, angle of view from the window of property, the need for excavation operations, the appropriate elements and their arrangement according to the style and context of the customer.

---

### **B: 3-D Design Pre- Implementation:**

Before landscaping, 3-D images of the project in hand will be revealed so that esteemed customers can get acquainted with the implementation and operation. Therefore, if they intend to change and apply their comments, they are asked to express their opinions with an open mind at the very beginning and willingly leave the work to Nadi Flower and Plant Collection.

**Email:** [info@nadigarden.com](mailto:info@nadigarden.com)

**Mobil:** 09121791724  
**Tel:** 22265014

**Nadi's show\_room:** front Nasim Garden, South Sima Ave, Yazdanian St, Shariati St, Tehran, Iran  
**Nadi's Greenhouse:** Saleh abbad,s Channel, Pooing road, Filestan Area, Pakdasht, khavaran Highway, Tehran, Iran

---

### C: Implementation of Green Space

After the green space design approved and finalized, the necessary actions will be taken by following prioritizations. These actions involve excavation, digging, implementing drainage and plumbing systems, implementing other installations such as wiring, planting, embedding the elements, implementing side-walks, and lighting.

In the landscape of green space, the first seen objects will be trees and plants. Consequently, in using plants and trees, their type and suitable conditions should be taken into consideration. The priority is to use native trees and plants in the region. Our experts consistently attempt to observe balance and symmetry in planting trees and plants in this part of the project.

---

### **D: Final Environmental Studies**

After completing the green space, all the approved elements need to be examined with the utmost heed to identify and remove all possible drawbacks and flaws. Also, all drainage, plumbing, and wiring systems must be scrutinized.

---

## The Most Important Elements in the Implementation of Green Space

The eye-catching view of these spaces is green space implementation with the correct combination of plants and the accurate arrangement of elements. The most remarkable elements in green space implementation can be attributed to the fountain, basin, pavilions, pergolas, flower boxes, artificial ponds, lighting equipment, various species of flowers and plants, and swimming pools flooring, and side-walks.

---

## Roof Garden

The roof garden is the modern technology of green roof that is implemented with very high efficiency on the roof and terrace. The conduction of the roof garden project is a specialized and engineering matter due to the need for light and very resisting materials, as well as the creation of a suitable context for cover growth of plants. The existence of this vegetation on the roof can help lower heat loss and reduce energy consumption in winter.

Among in the major benefits of green space on the roof top is the amount of sunlight that can be received throughout the day time, which is viewed as a cozy place for rest, entertainment, and growing flowers and plants by a beautiful pavilion.

---

## Green Wall

One of the most prominent issues observed in the context of the green wall is the manner of its implementation. Non-observance of the principles in the design and installation of green walls can bring considerable damages and a lot of costs for the employer. The following principles are required to be noticed during the construction of the green wall:

- ✓ Making use of plants with limited water demand
- ✓ The resistance of applied plants in the green wall to drought and water deficiency
- ✓ The appropriateness of plant growth volume with soil volume
- ✓ Observing the principles of aesthetics and appropriate color combination

---

## Villa Landscaping

In the villas' landscape, the inappropriateness between the building and the site will contribute to visual confusion for the audience.

Designing a yard of the villa is a specialized practice, so it is advised to ask help from green space specialists. The choice of plants while designing the villa's yard is as significant as the choice of materials. Therefore, with the end of achieving the best outcome, esteemed employers should accomplish the required cooperation with the executive engineer to choose the plants.

---

## Hospital Landscaping

Designing the green landscape of hospitals is greatly different from the landscaping in other places. In discussing the design of green space for hospitals or psychiatric hospitals, the following factors should be specially considered:

- Allergic plants or plants with a lot of pollination should not be used.
- Cover plants prevent soil and dust from rising, so it is considered one of the best choices. For example, grass aids purification of the space and is necessary for the hospital site's design for its soft texture.
- In the hospital environment, the animal manure, especially the fresh type, are not allowed to be used as far as possible, since the hospital site will turn into a place for insects. Thus, we prioritize making use of compost.
- Flowers used in the landscaping of hospitals or psychiatric hospitals green spaces should have neutral colors, such as white so that they can feel the sense of peace and calm. Therefore, it does not seem reasonable to use plants with a rough texture and harsh colors to design a hospital or psychiatric hospital's green space.

## Landscaping of Commercial and Official Complexes

In the design of the landscape of commercial and official complexes, more than the matter of applying green spaces, its beauty will be of utmost significance. However, considering the employer's opinion, some parts can also be recognized as an applied form. However, it is necessary to create landscapes that can be seen from far distances, especially in commercial places.

In the site of complexes, the following points can be applied:

- The use of plants with soft texture mainly in the landscaping of complexes and offices
- The use of palms indoors in case of enough light and good ventilation
- Flower boxes, green walls, and generally vertical green space as the best choices

- In the event of using flowering plants, they should be planted in the place with the least possibility of access and arrangement.
- The design of the green space as a roof garden should not be overlooked.

### **Maintenance and Improvement of Green Space**

Greenspace maintenance is an essential and inevitable matter. As the design of green space and its implementation is of paramount importance, conservation of green space is equally important.

Greenspace maintenance involves the following measures:

### **Irrigation Services**

Nadi Garden provides various periodic services of maintenance and preservation of specialized green spaces to customers according to the plants' diversity and climatic conditions, as follows:

---

**Website:** [www.nadigarden.com](http://www.nadigarden.com)  
**Email:** [info@nadigarden.com](mailto:info@nadigarden.com)

**Mobil:** 09121791724  
**Tel:** 22265014

**Nadi's show\_room:** front Nasim Garden, South Sima Ave, Yazdanian St, Shariati St, Tehran, Iran  
**Nadi's Greenhouse:** Saleh abbad,s Channel, Pooing road, Filestan Area, Pakdasht, khavaran Highway, Tehran, Iran

- Installation of sprinkler systems specified for grass
- Pump exchange
- Exchanging and modernization of sprinkler systems
- To Drop irrigation
- To Exchange of hydraulic and electric valves
- Checking the irrigation system series, rotor, and nozzle
- Checking and installing low-voltage electrical wires
- Checking water flow

---

## Spraying Agricultural Poison Services

For more convenience of our esteemed customers, Nadi Garden offers garden and green space spraying **Agricultural** poison service to utilize the best skilled and experienced experts in their work.

In this part, it should be particularly noticed that not only are all insects destructive but also some of them are conducive for gardens and little gardens. So, it is recommended not to kill all insects with unnecessary spraying poison. Therefore, detecting the time of spraying **Agricultural** poison, the amount and type of poison should be performed fully under experts' supervision.

It provides various periodic services of maintenance and preservation of green spaces to customers considering the plant diversity and climatic conditions.

---

## **Fertilization Services**

Fertilization is a highly important process requiring comprehensive knowledge in this field regarding the variety of products and time-consuming fertilization effects. Experts in the Nadi greenery collection specify the required fertilizer and prescribe its amount by identifying the deficiency and abundance of plants' elements.

## **Pruning Services**

Our experts are notified of this operation's time and manner to prevent the root and plant growth process from damages. This section contains grass arrangement, edging machine, aeration, grass-feeding and foliage removal, pruning of palms and trees, tree exchange, tree shaping, weeding (trimming and weeding), etc.

---

## Nadi Flower and Plant Executive Projects

Project Name	Description of Project	Location Operations
Erfan Hospital	Part of the hospital yard	Sa'adat Abad
Embassy of Denmark	Landscaping the embassy yard	Shariati, Pole Romi
German Embassy Garden	Shrubs and seasonal flowers	Pole Romi
United Nations	Types of flowers and plants	Shahrzad Boulevard
Parsian Bank	Patio section of e-commerce building	Jordan, Sayeh Street
Noor Hospital	Terrace and courtyard office	Jordan
Rose Commercial Complex	Front yard of the building	Mir-damad
Aram Tower	2000 meters of yard landscaping	Zafar Street
Classic tower	1500 meters of yard landscaping	Dulat Ave
Irasco Company	Landscaping Roof Garden	
Engineer Shirzad Building	Landscaping Roof Garden	Jordan
Engineer Tavakoli Villa	2,500 Yard landscaping - drip irrigation	Meygon
Engineer Tahmasebi Dyeing Factory	landscaping the yard ۱۵۰۰	Shahriar
Shadkam Leather Factory	20,000 meters of landscaping	Varamin Industrial Town - Charmshahr
Mr. Ghamsar Garden Tower	1000 meters of yard and terrace	Niyavaran
Engineer Fateh Tower	Yard landscaping	The end of Kamaranieh
